OPEN ACCESS TO PROJECT RESULTS:

PUBLICATIONS, DATA, SOFTWARE AND EDUCATIONAL RESOURCES

Results

Results from projects funded under this call should be subject to open access under an appropriate Creative Commons License (ex. CC-BY). The purpose of this is to ensure future reuse of project outputs for the wider Nordic and international community. This means that within a reasonable time, project results should be published and made available through relevant national and/ or international organisations or on suitable web sites.

Data management

A plan for how data will be managed in the project is strongly encouraged. NordForsk does not point to any particular template for data management plans. There are however several templates available online that may be used.

Such plan should contain descriptions of FAIR* data management targeting the whole data life cycle. You should describe how data will be made findable, including provisions for metadata, openly accessible, interoperable and re-usable.

Also clarify how data will be published including descriptions on:

- *Data.* Describe how the data to be collected as part of the project and the purpose of its collection, its origin, which types and formats to be used, and data utility.

- *Data collection.* State when data will be collected, processed and generated.

- *Data publication.* Describe when and how your data will be made available to other users, for example, by publication through a national or institutional data repository, or through deposit in a subject-specific database. Also indicate the license that will be used in the publication.

Justify any delay, omission or selective publication of data. In those cases where there are technical difficulties with data publication, also state how you intend to solve this.

- *Budget for data publication.* Justify your budget information relating to data publication, together with other items in your budget. Note: the costs of data storage that are deemed to be the responsibility of another organisation should not be included in the proposal.

- *Data preservation.* Describe how data will be curated and stored (including after the end of the project).

- *Contact person.* Indicate the contact person and contact information regarding these data.
